PROFILE

Graduated from the Master of Landscape Architecture program at La Sapienza di Roma. My thesis focused on climate change, geodesign, spatial planning, and well-being of vulnerable communities. I support design solutions that restore degraded environments and enhance human resilience.

WORK EXPERIENCE

Landscape Architecture Intern (Mashhad Municipality, Iran)

Feb 2021- Sep 2021

Partnered with municipal parks to design sustainable, accessible, and community-focused green spaces.

Landscape Architecture Intern (Mashhad Municipality, Iran)

Oct 2019- Nov 2020

Designed sustainable urban green spaces using software, prepared city parks for spring, and developed Aboutaleb Square's approved design in Mashhad.

Landscape Architect (Green Hall Garden Center & Plants, Mashhad, Iran)

Mar 2018- Aug 2018

Managed vegetation and landscape design for clients.

EDUCATION

Bachelor of Landscape Architecture, Islamic Azad University, Mashhad, Iran

2017-2021

Graduated as the Top Student (18.26/20)

Master of Landscape Architecture, La Sapienza, Rome, Italy

2021-2024

WORKSHOPS

International Landscape Design Workshop (New Cycling Landscapes in Rome)

Faculty of Architecture – Sapienza University of Rome – Italy 2024

Sao Paulo Builds: Progetti Di Case Brasiliane (Architecture as synthesis of techniques and art)

Faculty of Architecture - Sapienza University of Rome – Italy 2022

Percezione, Comprensione e Progettazione Del Paesaggio

Faculty of Architecture – Sapienza University of Rome – Italy 2022

1 SANTA MARIA DELLA PIETA

LOCATION:

Italy, Rome

SITE AREA:

9.97 KM2

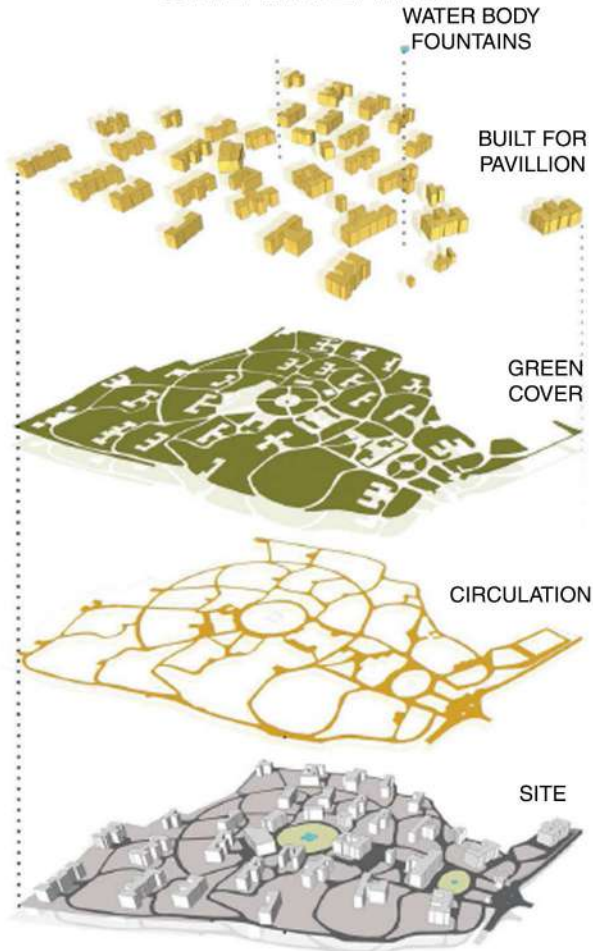

The Santa Maria della Pietà psychiatric hospital was an institution dedicated to the treatment of mental illnesses in the former province of Rome. Established in the 16th century, it underwent several relocations until 1907 when it settled in Monte Mario, a region situated in the north-western sector of Rome. The institute's pavilions were constructed in 1907 on this site, which is currently owned by the Lazio Region. The facility encompasses a central building along with approximately forty pavilions.

Wellness is commonly understood to encompass seven dimensions, each of which contributes to our overall sense of well-being and quality of life. These dimensions are interconnected and mutually influence one another. Although there may be variations in prominence among the dimensions at different times, neglecting any one dimension for an extended period can have detrimental effects on one's overall health.

NOSRAT PARK

LOCATION:

Iran, Mashhad

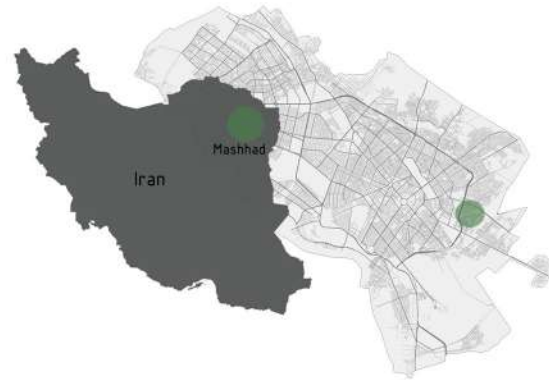

SITE AREA:

20 KM2

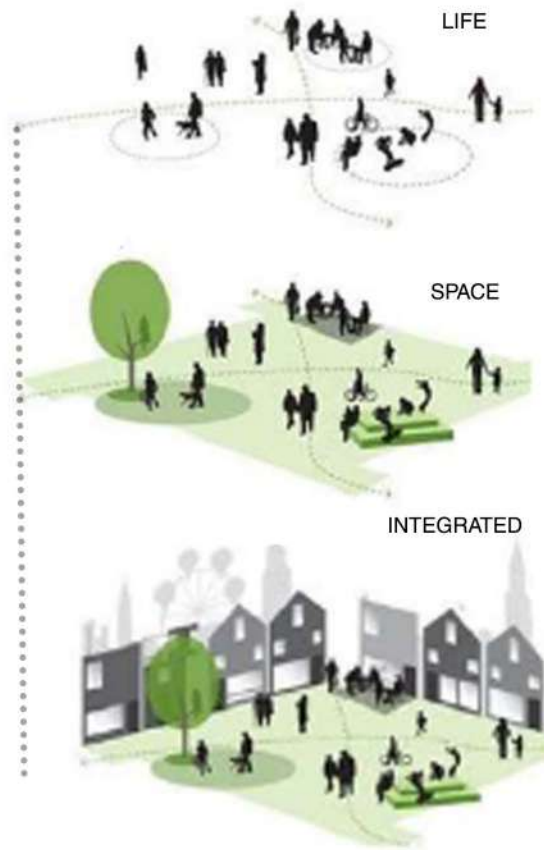

Nosrat Park is situated in District 6 of Mashhad, Razavi Khorasan. Specifically located in Mashhad's Porsina neighborhood, it can be found along Moftah East Boulevard, Shahid Kargar Razi, Watan Dost 14. The park operates around the clock, providing services to visitors throughout the day. In terms of its geographic position, it is in close proximity to Farhang Sarai Salamat Park Nusrat, Farhang Sarai Salamat bus station, and Shahid Khosh Sima Municipality's artificial grass field.

The primary objective behind the design and establishment of this park is to introduce a green space in the area, making it easily accessible for the public. This intention stems from the vacant space surrounding it and the congestion experienced on the surrounding streets.

GUIDO RENI BARRACKS

CONCEPT & DESIGN DEVELOPMENT: CUBICLE BASED

LOCATION:

Italy, Rome

SITE AREA:

7.2 KM2

Guido Reni, originally established in 1906 as a military facility specializing in the development of electronic and precision mechanics instruments, has remained unused for a considerable period of time.

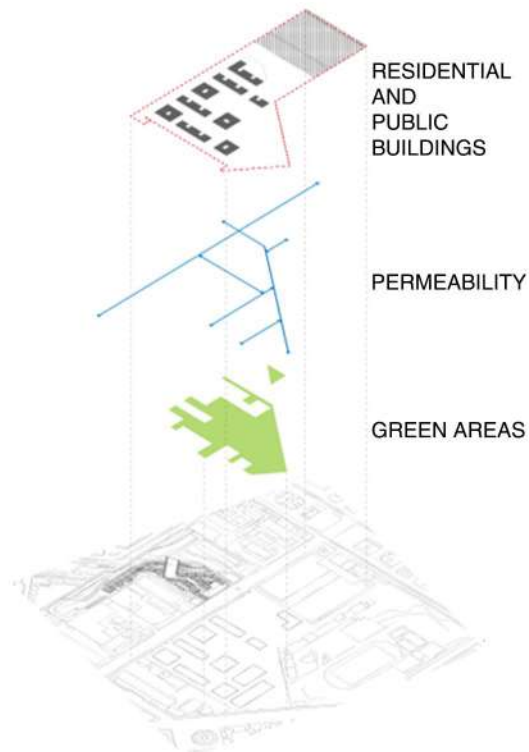

The proposed concept for the site's revitalization is inspired by Eduardo Arroyo's "Plaza de Desierto Baracaldo." It involves creating a cubic-shaped space with distinct functions assigned to each cube, incorporating a diverse range of materials, grasses, plants, and trees. This ecological area aims to encompass three distinct zones: a residential area, a city of science, and a green space.

Furthermore, the design incorporates eco-friendly principles, such as the utilization of wastewater for plant irrigation and the installation of solar panels to harness solar energy.
